WENTWORTH METAL WORKS

We design, fabricate and install in the greater Bay Area and ship to all 50 states. No matter where your project is located, we are fully licensed, bonded and insured for every project we take. If you require a keen eye for details, high quality welding and finishing, with hands-on design and customer satisfaction, we're the ones to call. Contact us for more information and a quote!

We specialize in unique, contemporary residential and commercial metal. With over 50 years of experience, we have the expertise to design and fabricate impeccable metalwork for your project. Whether you want pre-engineered railings or a custom staircase, we provide excellent service and high quality metal products.

Our Wedge Lock 3000 railing system is patented and we are the only company offering such a system. It is years of designing and installing railing products that helped us develop Wedge Lock 3000. More specifically, it is the result of installing many cable railing systems we felt were substandard and lacking the quality our clients deserve. We kept saying, "there has to be a better way," and Wedge Lock 3000 was the answer: the railing system that cable rail wants to be.

OUR SPECIALTY

Our specialty is aluminum fabrication, an alternative to steel that doesn't rust over time, is lighter and more economical, and allows for easy installation with no onsite welding required. We have over 500 proprietary extruded shapes designed to make railings, canopies, grilles, trellises, gates, stairs, and more. Our aluminum shapes can be combined with stainless steel, cold rolled steel, and bronze to match your aesthetic or existing materials. We can incorporate glass, perforated metal panels, and have the capability to polish, anodize, or powder coat to achieve a huge variety of finishes and colors. If you can draw it, we can build it.

WE ARE GREEN

Our products offer a variety of Green advantages.

The main components of our products are aluminum, which is recyclable and high in recycled content. Much lighter than steel, aluminum has less environmental impact during shipping. Even after the long and useful life span of our products, they are 100% recyclable. The specific alloy of the extrusions we order typically contain 25% recycled aluminum.

The stainless components we use come from suppliers who are part of the Specialty Steel Industry of North America Association (SSINA). SSINA manufacturing standards for stainless range between 75-85% recycled content.

From aluminum extrusions to stainless nuts and bolts, our components are sourced from 100% American-Made companies before being assembled in our California facility. Any extra material, cut-offs, and scrap are recycled locally.
